## STATE POPULATION AGED 55+ WITH COLLEGE DEGREE (2006)

Education and training continues to be the cornerstone of the efforts that states make to link workforce development with plans for sustainable economic progress. Putting lifelong learning into practice will continue to be a critical success factor, both for states as well as for individual workers. There are exciting examples of collaborative initiatives in states across the country where community colleges, state universities, employers, workforce incentive boards, and training service providers are working together to expand opportunities for workers of all ages, including older workers, to enhance their work-related competencies and educational attainment.
