Employment Probability Analysis Project
Selected Sample Frequencies for
Annual Female Estimation Files
1971 - 1975

Social Welfare Regional Research Institute
Boston College
February 1977
SWRRI Publication #44

This booklet contains sample (unweighted) frequencies for most of the variables contained on the five female estimation files prepared for the Employment Probability Analysis Project. These files contain data for females only, for the United States as a whole. All data are stored as fixed binary integers in internal data format. At present these data can be accessed only with a PL/I program which contains a 322 byte structure variable which has a declaration consistent with that of FEMALE_FILE listed in Figure 1.

The frequencies presented here are for five population groups:

Table 1: All females (total sample)

Table 2: Female heads of families (P_TYPE = 1)

Table 3: Wives of male heads of families (P_TYPE = 2)

Table 4: Females in male or female headed families (P_TYPE = 3)

Table 5: Unrelated primary or secondary females (P_TYPE = 4)

The variable names and code values in the following tables correspond to those listed in the Employment Probability Analysis Project codebook describing the five annual female estimation files. See:

Employment Probability Analysis Project

Codebook

Annual Female Estimation Files

1971 - 1975

For further information contact Dr. Lynn B. Ware, Senior Research Associate, Social Welfare Regional Research Institute, Boston College, Chestnut Hill, Massachusetts, 02167.
